# 1 Basic property information

Festia building is situated on the Hervanta campus of the Tampere University, on the south side of the campus area, in between the Konetalo building and Tamppiareena. Festia building houses mainly study and work spaces and laboratory facilities. The property is mostly used on weekdays during office hours, but the work and study facilities are available to students and personnel around the clock, including weekends.

## 1.1 Basic information

<b>Property name</b>	Hervannan kampus, Festia
<b>Building name</b>	Festia
<b>Building address</b>	Korkeakoulunkatu 8 33720 TAMPERE
<b>Number of buildings</b>	1
<b>Property owner</b>	Suomen Yliopistokiinteistöt Oy
<b>Year of construction</b>	1995
<b>Surface area</b>	10,653 m <sup>2</sup>
<b>Number of floors</b>	5
<b>Fire class</b>	P1
<b>Building material</b>	Steel reinforced concrete
<b>Use</b>	Educational institution

## 1.2 Other information

The site falls within the area of the following rescue service: Pirkanmaa.

<b>Fire alarm manager</b>	Janne Puranen Campusta Oy phone 050 3187132
<b>Location of the fire alarm</b>	Basement floor A-section in staircase FA001 (main control unit)
<b>Maintenance</b>	Campusta Oy phone 010 3408500 service 010 3950395
<b>Electricity supplier</b>	Tampereen Sähköverkko Oy
<b>Water company</b>	Tampereen kaupunki: Tampereen vesi tel. 0800 90172 service line 0800 90172 <a href="http://www.tampere.fi/vesi.html">http://www.tampere.fi/vesi.html</a>
<b>Gathering area</b>	Festia building's parking area
<b>Key storage lock box</b>	On the north side of the A-section, next to the basement floor entrance
<b>Heating type</b>	District heating
<b>Main water shutoff</b>	Basement floor A-section in heat distribution room FA003
<b>Heat distribution room</b>	Basement floor A-section room FA003

<b>Electricity switchboard</b>	1. floor D-section in room FD129
<b>Location of substation</b>	1. floor D-section in room FD130-131 (Distribution substation 7)
<b>Gas shut-off</b>	D-section gas centre main shut valves are in D-section's 1. floor corridor D108, and E-section liquid petroleum gas (LPG) main shut valve is in 1. floor research and development hall FE101 gas centre.
<b>Ventilation device</b>	Seven ventilation machinery rooms in total: 1. floor A-section in room FA142, 2. floor E-section in room FE202, 3. floor D-section in room FD322, and rooftop / 4. floor A-D-sections in rooms FA401, FB401, FC401 and FD401

## Number of people

	<b>Total</b>		
	<b>During the day</b>	<b>In the evening</b>	<b>At night</b>
On weekdays	1,000	500	30
On weekends	150	100	30

## Update of the plan

The University of Tampere / University Security Manager is responsible of updating the plan, unless otherwise agreed in writing.

The plan must be updated at least once a year and whenever changes occur in the content of the plan. The plan will be approved by a member of the University's management after the completion of the plan.

After minor updates (individual organizational changes, small additions, or small changes), the plan does not need to be re-approved. After significant changes (policies, practices and major organisational changes, etc.), the plan must be re-approved.

## 2 Organisation

### 2.1 Safety personnel for the property

**Safety chief, campus manager, safety matters that are the responsibility of the property owner**

Aapo Kauppinen  
Suomen  
Yliopistokiinteistöt Oy  
phone 040 0774934  
aapo.kauppinen@sykoy.fi

**Work protection manager**

Kirsi Reiman  
Tampereen yliopisto  
phone 040 8490461  
kirsi.reiman@tuni.fi

**Person responsible for safety**

Riikka Laurila  
Tampereen yliopisto  
phone 050 5605769  
riikka.laurila@tuni.fi

**Facility safety specialist**

Juha Huhtala  
Tampereen yliopisto  
phone 050 4478540  
juha.huhtala@tuni.fi

**Electrical machinery usage manager**

Ilpo Virkki, Campusta Oy  
phone 040 9008380

## 2.2 Important numbers of the property

Task	Name	Telephone number	Service phone number
Maintenance company	Campusta Oy	010 3408500	010 3950395
Lift maintenance	KONE Hissit Oy		0800 15063
Lobby doorman	Festian infopiste	029 4524011	
Emergency surveillance	Vartiointi: AVARN Security Oy	050 5967120	

### Maintenance

	Name	Telephone number	Duty hours
Burglar alarm: Service person	Juha Huhtala	050 4478540	
Camera surveillance: Service person	Juha Huhtala	050 4478540	
Fire alarm: Attendant	Janne Puranen	050 3187132	
Maintenance duty	HH-kiinteistöpalvelut Oy	010 3950395	Outside of working hours

## 2.3 Other important numbers

Operator	Telephone number	Duty hours
Public emergency numbers	112	24 h
Poison information centre	0800 147 111	24 h

## 3 Risks

### 3.1 Risks of the Property

#### **Fire and explosion**

Possible causes of fire can be for example defective electric devices, careless smoking, working methods that cause sparking and sparks from the equipment, flammable chemicals and chemical leakage. Fire within the property can cause personal injuries and extensive financial damage, as well as disturbances and interruptions of operations.

#### **Arson**

Prone objects for arson are vehicles and flammable materials nearby the property. Arson can spread to a major fire that can cause personal injuries and extensive financial damage, as well as disturbances and interruptions of operations. Even a minor beginning of a fire causes structural damages, hazardous situations to personnel as well as additional repair work.

#### **Accidents**

An occupational accident or a sudden attack of illness can happen to a student or staff member on the premises. Accidents can be caused by for example falling down, tripping, falling during repair or other work, work movements, heavy lifting, slipping on a chemical leak on the floor or a hazardous situation during a teaching situation. Accidents cause personal injuries, disturb the operation, financial expenses and absences from work.

#### **Sabotage and vandalism**

Staff members and students with individual access rights move within the property daily. Entrances are locked only at night, when the property can be entered with access permission. Possible sabotage and vandalism can cause major damage and interruption of operation, as well as hazardous situations for the students and personnel. The possibility of sabotage and vandalism is responded to with surveillance cameras. In addition, security is provided by a security company.

#### **Theft and robbery**

Reasons for theft or robbery can be, for example, need for money or interest in confidential information. The greatest possibility to encounter such an act is on a journey to and from work. Consequences for the victim can be mental and physical damages in addition to the financial losses or the loss of valuable information.

#### **Bomb threat**

Bomb threats can be caused by many reason. For example a disturbed person can direct his/her

frustration towards all the people working and doing business in the property. A bomb threat causes mental suffering to all students and personnel, as well as financial expenses and disturb the normal operations.

### **Information security**

An information leak or a malfunction in the information network are significant risks. Confidential information can fall into wrong hands if information security is jeopardized. Consequences can be financial expences as well as disturbances on operation of the entire facility.

### **Municipal infrastructure disruptions**

#### *Power cut*

A power cut can be caused by a natural event such as a storm or lightning, but also electric failures and malfunctions, technological deficiencies or maintenance deficiencies. Power cuts can cause risk of an electric fire, personal injuries, disturbances on and interruption of operation.

#### *Water damage*

Water damage can be caused by for example pipe breakage, freezing, blockage or machine damage. Water damage can cause excess water leakage or interruption of water flow to the facilities, and consequently restrictions for water use within the facilities.

### **Hazardous chemicals and gases**

Chemicals can cause a health hazard as well as risk of accident, such as a fire or explosion. When entering soil, sewerage or waterbody, chemicals may cause an immediate or delayed danger to the environment.

Gas hazard in the property can be caused by the gases used in the property, such as gas cylinders, or by an external incident, for example an accident in transportation of hazardous substances near by. Consequences of a gas hazard can be for example danger of fire and explosion.

### **Radiation hazard**

The propability of a nuclear emergency in Finland is very low. External radiation hazards can be caused by a domestic or foreign nuclear power plant accident, a fire or other accident in a facility that handles or stores radioactive material, or an accident in the transportation of radioactive material. The consequences of a nuclear accident are highly dependent on the source of the radiation, distance, environmental conditions and how the situation is responded to.

### **Environmental hazards**

Environmental hazards can be caused by for example extinguishing wastewater leakage. Traffic causes a risk of accident to people moving on the premises, as well as an environmental risk by for example oil leakage from a traffic accident.

## **Personnel action in unexpected dangerous situations**

In order to prepare for an unexpected dangerous situation it is important that the personnel is trained in co-operation with the Rescue Department. University personnel needs to know how to act in case of an emergency and how to guide the rescue department to the destination, and laboratory personnel needs to know how to exit the property. The rescue department needs to know about any facility within the premises that has special demands or function.

## **3.2 Specific risks and remarks of the property**

### **Chemicals and gases**

Festia building's sections D and E on the side of Hermiankatu -street house the laboratory and research facilities, where a large amount of chemicals and gas cylinders are stored and used. Gas storages (special gas storage, hydrogen storage and acetylene / liquefied petroleum gas (LPG) storage) are located in 1. floor D-section. From the gas storages gases are directed via pipeline network to the first, second and third laboratory floor. D- and E-section laboratory facilities contain electrical equipment, heat plates, bunsen burners, as well as gases, chemicals presenting a fire hazard, and liquid nitrogen. Gas leaks or electrical equipment failures can cause an explosion or fire. Wastewater research takes place in D-section laboratory facilities, where appropriate vaccinations are required to access the facilities.

Access to the laboratory facilities is allowed only with the permission of the laboratory manager after orientation. Chemicals are used and stored in rooms, chemical cabinets or fire safety cabinets with warning signs. Protective clothing and safety goggles are available according to the instructions given. Laboratory facilities are equipped with emergency showers and eye rinsing pools. There are fume cupboards and local exhaust ventilation for keeping and handling volatile substances. The gas lines and related valves are built in accordance with the regulations and their condition is checked regularly.

## 4 Safety procedures

### 4.1 Safety at premises

#### Access control

The property has a physical access control system in use. This system aims to prevent unauthorised people from entering the premises. In the event that you detect a flaw in terms of the access control system, make a report.

#### Access control

Description	The main doors of Festia building are open on weekdays from 7.30 a.m. to 5 p.m. Working, studying and hobby facilities of Hervanta campus are available for students and staff around the clock. Buildings in campus area are divided into access control areas and can be accessed through access controlled doors by using a key card.
-------------	--

**The property has a recording CCTV system.**

#### Camera surveillance

Description	The property has surveillance cameras in public spaces.
Service person	Juha Huhtala phone 050 4478540

**The property has burglar alarms**

#### Burglar alarm

Description	The property is equipped with door alarms and glass breakaway detectors.
Service person	Juha Huhtala phone 050 4478540

## Surveillance

### Emergency surveillance

Description	The doors and windows are equipped with surveillance alarms. Alarms are directed to the Info desk from Monday to Friday at 9 a.m. till 3 p.m., and respectively to AVARN Security Oy at other times.
Location	Festia building, The entire property
Contact	Vartiointi: AVARN Security Oy phone 050 5967120 vartija.tuni@avarn.fi

### Lobby doorman

Description	Open Monday to Friday from 9 a.m. to 3 p.m.
Location	Festia building, Festia building lobby
Contact	Festian infopiste phone 029 4524011 festia.info@tuni.fi

### Local security

Description	Security guards go round the property during the evenings on weekdays and night time.
Location	Festia building

### District surveillance

Description	Security guards go round the property at weekends.
Location	Festia building

## 4.2 Extinguishing equipment

Location	Extinguishing equipment	Description
Near the kitchen facilities and in laboratories	Fire blanket	Is suitable for extinguishing for example kitchen fires or people on fire.
In the hallways, public areas and laboratory facilities	Fire extinguisher	Fire extinguishers are mainly powder extinguishers that are suitable for regular fire extinguishing. The property is also equipped with CO <sub>2</sub> -extinguishers (carbon dioxide) that are suitable for extinguishing for example liquid and electric fires.
In lobbies and corridors	Fire hydrant	Suitable for extinguishing solid (fiber like) fires. Not suitable for extinguishing fires of electrical devices or liquid and grease fires.

**Hand-held fire extinguishers should be inspected:**

- at least yearly when the extinguisher is subjected to factors affecting its operational ability, such as moisture, vibration or fluctuations in temperature (outdoor areas)
- at least once every two years (indoor areas)

**Fire hydrants should be inspected:**

- The functionality of the rapid fire hydrants should be checked every year. A pressure test for the rapid fire hydrant hoses should be performed at five-year intervals.

### 4.3 Protection models

**Festia building**

Type	Number of floors	Description of implementation
The property's own	kaikki	Virka-aikana kiinteistöhuollon työntekijät ottavat pelastuslaitoksen vastaan ja ohjaavat kohteessa. Virka-ajan ulkopuolella tapahtuneissa hälytyksissä ohjauksesta kohteessa vastaa kiinteistöhuollon päivystäjä.
Regional monitors	kaikki	Yliopiston henkilökunnasta on muodostettu turvaryhmiä, jotka toimivat turvallisuusorganisaation tukena turvallisuuden varmistamisessa osana jokapäiväistä toimintaa sekä mahdollisissa poikkeustilanteissa.

### 4.4 Safety equipment

**Smoke extraction**

The purpose of smoke ventilation is to remove fire gases, smoke and heat from the premises. The smoke ventilation equipment must be maintained and tested regularly according to the user maintenance instructions. The smoke ventilation equipment may only be used by the rescue services.

### Smoke removal machine

Location of smoke extraction hatches	Smoke ventilation hatches (four units) in the A-section lobby ceiling, and smoke ventilation windows (nine units) near the A-section ceiling. Smoke ventilation manual control in A-section basement floor staircase FA001. Manual control of the smoke ventilation windows in the upper corridor can also be found in the A-section 1. floor lobby.
Location of centre	Basement floor A-section in staircase FA001
Smoke removal activation	Manual launch

### Exit guide, security or signal light

Emergency exit signs show how to exit the building. Any faulty or incomplete signs must be reported to property maintenance services.

### Exit guide, security or signal light

Location	Emergency exit lighting at the exit routes and exits
Description	The building is equipped with safety lightning system that covers exit lightning and emergency lighting.
Location of centre	Two centres in total: lobby floor A-section in room FA063 switchboard, and 2. floor D-section in room FD202
Coverage	The entire building

### HVAC alarm system

The HVAC alarm system will alert on any fault situations in building engineering.

### HVAC alarm

Description	The building automation system is connected to the campus area central monitoring station that is located in the Päärakennus building. Alarms are directed to property managers or external on-call service organization via the central monitoring station.
Company to which alarms are directed	Are Oy

## 4.5 First aid

According to the Occupational Safety and Health Act (738/2002) 46 §, the employer is obligated to ensure the availability of first aid to employees and other personnel at the work place, to provide directions for getting first aid, as well as reserve enough first aid supplies at the work place or in its close proximity.

- First aid training has been organised.
- People capable of administering first aid have been identified. The list of first aid-skilled people is located at: Risk Manager Mirva Seppänen has the list.
- The ambulance will be directed to: To the nearest exit.
- Emergency contact person: aulapalvelut.

#### The property has the following first aid items available:

Utensil	Location
First aid cabinet	On every floor
Defibrillator	A-section lobby floor near the Info desk
Emergency shower	In laboratory facilities and research and development hall
Eye-rinsing equipment	In laboratory facilities and research and development hall

## 4.6 Fire safety

### Fire alarm

The purpose of the automatic fire alarm system is to warn people in the property about an imminent fire. The system detects fires quickly as sensors react to the fire and the alarm bells start ringing. The system will alert the emergency response centre automatically.

#### Fire alarm

Location	Three fire alarm central panels in total: basement floor A-section in corridor FA001 and in heat distribution room FA003, and 1. floor C-section in room FC105
Description	The property has a fire alarm system that is connected to the regional fire brigade control and equipped with fire alarm buttons.
Location of centre	Basement floor A-section in staircase FA001 (main control unit)
Coverage	The entire building
Type of centre	Esmi
Attendant	Janne Puranen Campusta Oy phone 050 3187132
Caretaker's deputy	HH-kiinteistöpalvelut Oy phone 010 3950395

#### Securing the functionality of the notification transfer connection

- Periodic maintenance and malfunction repairs
- Monthly testing of the notification transfer connection
- Periodic inspections

### Actions in the event of malfunction of the notification transfer connection

In the event that a malfunction is detected in the notification transfer connection, an enhanced surveillance is performed on the premises with the help of personnel.

- Connection to the emergency centre
- An on-call person to supervise the fire alarm centre
- An on-call person makes the emergency notification if needed and guides the rescue department to the site of fire

### Fire compartmentalisation

The purpose of fire compartmentalisation is to limit the spread of smoke and fire and to secure safe exiting. For this reason, it is very important that the fire doors are kept closed. **Fire doors must not be wedged open.**

The floors, basement floors and attic of the building are generally divided into separate fire compartments.

The size of a fire compartment is generally limited so that a fire starting in the compartment does not cause excessively large property damage.

Spaces which differ from each other fundamentally in terms of usage or fire load are divided up into separate fire compartments, if it is necessary for the protection of property or personnel. (usage way compartmentalisation)

### Rescue route

The rescue way is a drive way, which the rescue department's vehicles can use in emergency situations to reach to within close proximity of the building.

- It is not permitted to park cars, pile up snow, set up lampposts, plant vegetation, or do, leave, or set up anything else that might block traffic on the rescue way.
- Escape routes must be indicated with a text sign in accordance with Ministry of the Interior decree no. 468 of 2003.
- A rescue way sign is not used if the rescue way is not marked in the building's construction permits.
- Please contact rescue authorities for advice on any escape route questions.

### Rescue route

Location	From Korkeakoulunkatu -street to the vicinity of the A-section, and from Hermiankatu -street to the west and east sides of all the building's sections. Rescue routes are marked on the protection layouts.
----------	---

## Emergency exit routes

The principle of exit safety is that all spaces of the building must have at least two exit routes at all times which do not require keys or other tools to open the doors. Doors are not to be kept double-locked during working hours. Objects are not to be stored in front of the exits.

There are the following types of evacuation procedure in the property:

Building	Evacuation procedures
Festia building	Evacuation is conducted along the nearest safe exit route to the gathering area outside. In most cases the normal exit routes of the building are used as emergency exits. In addition, there are a few separate exits that are only used in emergency situations. When exiting, it must be noted that there are no other persons left in the room. Fire doors and ordinary doors should be left closed.

**Gathering area:** Festia building's parking area

## Extinguisher water collection point

### Extinguisher water collection point

Location	Fire hydrant is located in the outdoor area between the Kampusareena and Tietotalo building.
----------	--

## Hot work

Hot work is defined as work in which sparks arise or in which naked flames or other heat sources are used and may cause a fire hazard. Such work includes e.g. oxyacetylene and arc welding, flame and arc cutting, disc cutting and metal grinding, which create sparks, as well as work involving the use of gas burners, other open fire or combustion air blowers. Alternative methods must always be considered for hot work due to the fire hazard it presents.

Carrying out hot work always requires a hot work licence. The person carrying out the hot work must have a valid hot work card.

Hot work licences can be granted by the following people responsible for hot work:

Ari Särkkä  
Campusta Oy  
phone 050 3471430  
ari.sarkka@tuni.fi

The fire alarm system tender must take care of any deactivations needed so that the hot work or other refurbishment work does not cause an unnecessary fire alarm.

Any possible fire alarm system deactivations are to be fixed.

## 4.7 Smoking area

The Hervanta campus of the University of Tampere is smoke-free, where smoking is only allowed in designated areas. Efforts must be made to prevent tobacco smoke from entering the interior. The design of smoking areas outside must be based on a distance of about 10 meters from the building's structures from which tobacco smoke can penetrate the interior.

In order to increase safety and prevent fire, it is important to pay attention to the daily use of the smoking area:

- There should not be anything flammable in the vicinity of the smoking area.
- The holder of a smoking area shall display signs indicating a smoking ban and a smoking area.
- Fire-safe ashtrays are to be used in smoking areas.
- Burning or smoldering waste material must not be mixed with other waste materials.
- Cigarette butts and ashes shall be sorted cold, thoroughly not smoldering and suitably packaged as mixed waste for landfill.

Smoking is prohibited for example in the following places:

- in the indoor areas of agencies and authorities and comparable public bodies, that are reserved for the public and customers;
- at public indoor events;
- in the common, public and customer-use indoor areas of work communities;
- in the canopies and auditoriums of public events held in outdoor areas and in other facilities intended specifically for the observation of the event, where participants stay put.

## 4.8 Waste management safety

Proper location, lighting, and locking of a property's waste point can prevent accidents and reduce the risk of fire. Attention should be paid to waste containers and shelters and the routes leading to them. The waste point or the exit corridors of the property must not be used as storage facilities. Loose objects in the garbage shelter and next to the wall pose a safety risk and are good incendiary materials for the arsonist.

Waste components are to be sorted accordingly to the designated waste container, in a way that the waste container lid can be closed appropriately.

Waste container row and waste shelter are safe to place:

- at least eight meters from the wall of the building;
- in a locked space so that a possible fire in it does not endanger the fire safety of the actual building.

## 5 Other arrangements

### 5.1 Lift

#### Lift

Location	Festia building has two passenger lifts in total, located in A- and D-sections.
Maintenance company	KONE Hissit Oy

### 5.2 Ventilation device

#### Ventilation device

Location	Seven ventilation machinery rooms in total: 1. floor A-section in room FA142, 2. floor E-section in room FE202, 3. floor D-section in room FD322, and rooftop / 4. floor A-D-sections in rooms FA401, FB401, FC401 and FD401
Description	The building has seven designated ventilation machinery rooms and an additional ventilation machine on the upper plateau of the staircase of the machinery hall.

#### Ventilation shutdown

If the property is subject to an external hazard, such as fire gases from an adjacent building, ventilation must be shut down. In this case, the rescue authority usually issues an emergency warning, which also provides further instructions and a request to shut down ventilation.

**In an emergency situation, the ventilation must be shut down entirely, with a clearly marked stop switch. The stop switch must be placed in an easily accessible location.**

## 6 Action guidelines

Instructions can be found on the front page of the Rescue Plan, under the title "Action guide".

## 7 Civil defence

This property does not have its own civil defence shelter.

The property has a civil defence shelter at the addresses:

- Korkeakoulunkatu 1, Tietotalo
- Korkeakoulunkatu 3, Sähkötaló
- Korkeakoulunkatu 5, Rakennustalo
- Korkeakoulunkatu 5, Kalliosuoja (Bommari)
- Korkeakoulunkatu 7, Kampusareena

The purpose of the civil defence shelter is to protect people from collapses, explosion pressure, fragments and radiation. Moving into civil defence shelters is always done through directions from the authorities. Accidents occurring in normal times do not generally ever require taking cover in civil defence shelters, with taking cover indoors being sufficient.

## 8 Informing and orientation

The Decree of the Government on Rescue Services (407/2011, Section 2) obliges as follows: *"A rescue plan is to be kept up to date and it must be communicated in the necessary way to the persons of the relevant building or other site, who are obliged to take part in executing the rescue plan."* The Rescue Plan and the most significant contents of it are to be informed to all personnel working in the property.

**Orientation and informing:** Managers are responsible for safety orientation. Safety organization supports the orientation. The Rescue Plan is also presented as a part of the orientation materials and safety materials of the organization.

*\*Safety training:* Safety organization organizes safety trainings regularly and according to specific needs. Execution of the Rescue Plan is trained in practice by organizing evacuation drills for everyone who use the property.

**Informing in crisis situation:** In a time of crisis, the top management and the Communications unit will oversee all communication activities and agree on related responsibilities to ensure that accurate information is provided as quickly and widely as possible. Only the top management or a person formally authorised to represent the University (such as a head of unit) may make statements on the University's behalf. The causes and effects of an accident or crisis may only be reported by the public authorities or those authorised by them to do so. Visit the intranet to stay up to date in the event of a crisis. Depending on the type of crisis, information may also be provided to staff and students via text message, email, the University's website or social media channels.
